PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience designing, building, and operating large-scale Java applications in mission-critical environments for global financial institutions. Deep expertise in enterprise integration and middleware (Apache Camel, Kafka, WSO2), application architecture, and JVM performance engineering, with full-stack capability across Spring Boot and ReactJS. Proven track record running production systems end to end — CI/CD automation, observability, and L1–L3 operational support under strict SLAs — while mentoring engineers and owning delivery. Certified Kubernetes Application Developer (CKAD) and AWS Certified AI Practitioner.

SKILLS

Languages: Java (primary), Python, JavaScript / TypeScript, Ballerina, Shell, C

Java Ecosystem: Spring Boot 3, J2EE, Hibernate, Apache Camel, JUnit, Cucumber, java.util.concurrent, Modern Java (Records, Java 21+, Toolchains), Maven, Gradle

Front-End: ReactJS, JavaScript / TypeScript, HTML, CSS, SPA development, OAuth2 / OIDC integration

APIs & Integration: RESTful APIs, SOAP / WSDL, gRPC, Apache Kafka, IBM MQ, enterprise integration patterns (EIP), event sourcing, WSO2 Enterprise Integrator / API Manager / Identity Server

Operations & DevOps: CI/CD (GitLab CI/CD, GitHub Actions), Linux (RHEL), Docker, Kubernetes (CKAD), Argo CD, SonarQube, build & release automation

Performance & Observability: Java Flight Recorder (JFR), JDK Mission Control (JMC), Flame Graphs, GC log analysis, profiling & latency tuning, production monitoring

Testing & Automation: Selenium (UI automation), JUnit, Cucumber, TDD, automated test frameworks

Databases: Oracle, PostgreSQL, MS SQL Server, MySQL, H2

Middleware & Cloud: AWS, Cloudflare, Vercel, S3 / S3-compatible storage, JBoss, WebLogic, Apache Tomcat, OSGi

Security & Standards: OAuth 2.0, OIDC, IAM, PII & sensitive data handling, GDPR, PSD2 / Open Banking, Australian Consumer Data Standards (CDS), Swagger / OpenAPI, XML, JSON, AVRO

CS Fundamentals: Application architecture, object-oriented design, design patterns, data structures & algorithms, software development lifecycle

AI / ML: AWS Certified AI Practitioner, ML model development (scikit-learn, XGBoost, TensorFlow), AI-assisted engineering (GitHub Copilot, ChatGPT, Google Gemini)

PROFESSIONAL EXPERIENCE

Crédit Agricole Corporate and Investment Bank | Senior Software Engineer

Oct 2023 – Present

- Serve as senior engineer on the integration platform team, building enterprise-scale services in **Java 21, Spring Boot 3, Apache Camel, and Kafka**, deployed on the bank's private cloud via GitLab CI/CD and Argo CD.
- Designed and implemented a multi-purpose integration platform connecting S3-compatible object storage, IBM MQ, Kafka, and REST APIs — providing a reusable foundation for cross-system data flows.
- Build and maintain CI/CD pipelines on **RHEL-based build infrastructure**, automating build, test, and deployment of enterprise banking services.
- Developed audit and message-replay capabilities using event-sourcing patterns to support regulatory traceability and operational recovery.
- Integrated SEPA and cross-border loan payment flows into the bank's data reporting ecosystem, applying enterprise integration patterns for scalability and resilience.

- Contribute to architectural decisions, code reviews, and quality standards across the team; collaborate with stakeholders on design proposals.

WSO2 | Software Engineer → Associate Technical Lead

Jan 2018 – Sep 2023

Associate Technical Lead (May 2021 – Sep 2023) • Senior Software Engineer (Jun 2019 – May 2021) • Software Engineer (Jan 2018 – Jun 2019)

- Co-led the design and delivery of the **WSO2 Open Banking Accelerator** with a team of ~10 engineers, building large-scale Java middleware applications adopted by client banks across the UK, Europe, Australia, Latin America, the Middle East, and APAC; worked onsite with client banks in the UK and Israel.
- Built a **Selenium-based UI automation test framework** for WSO2 Open Banking, improving release quality and reducing manual regression effort.
- Implemented core platform features including gateway request routing and execution frameworks, fraud detection / transaction risk integrations, conditional Strong Customer Authentication (SCA), and gRPC-based data publishing.
- Implemented customer-data handling to meet regulatory compliance requirements across GDPR, PSD2, and Australian Consumer Data Standards (CDS) — consent management, PII data protection, and identity-management compliance controls.
- Worked extensively with both **SOAP/WSDL and RESTful APIs** across WSO2 middleware products — WSO2 Enterprise Integrator, API Manager, and Identity Server — implementing customer requirements across a wide variety of domains; enhanced API Manager with Swagger and header validation, and contributed identity provider implementations to Identity Server.
- Drove a **75% performance improvement** on the Open Banking platform through systematic profiling with JFR, JDK Mission Control, flame graphs, and GC log analysis — eliminating bottlenecks in concurrent code paths and GC pressure.
- Owned **technology operations and L1–L3 production support** as Support Lead, maintaining SLA compliance for client-facing banking deployments; also held Product Owner and Release Manager roles.
- Recognitions: **WSO2 Committer (2018), Sustained Outstanding Contribution Award (2019)**.

EDUCATION

University of Moratuwa, Sri Lanka

Mar 2013 – Jan 2018

B.Sc. (Hons) in Engineering — Computer Science & Engineering

- **Second Class Upper Division** | GPA: 3.61 / 4.20
- **Final Year Project:** Spatio-Temporal Forecasting of Dengue Propagation using Mobility Data — built an ML model combining mobile network big data and weather datasets (Python, scikit-learn, XGBoost, TensorFlow, Apache Spark, Flask).

CERTIFICATIONS

Certified Kubernetes Application Developer (CKAD) — Mar 2025

AWS Certified AI Practitioner — Jul 2026

MENTORING & LEADERSHIP

- Mentored interns and junior engineers throughout career, particularly during Associate Technical Lead role at WSO2 — onboarding new joiners, guiding technical design, conducting code reviews, and supporting their professional development.
- Led cross-functional initiatives spanning product ownership, release management, and L1–L3 technology operations for client-facing banking deployments.
